Art Unit: 1771

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1, 6-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear whether the claims intend to recite a circuit device or if limitations regarding the circuit device are statements of intended use. Applicant has amended the claims to further define the circuit device as comprising a circuit pad, however, it is still not clear whether the claims are intended to encompass the circuit pad in combination with the laminate support or if they are drawn to the laminate support alone. Since the claims recite "A laminate support for wire bonding a circuit device in large scale integrated circuitry,..." it will be presumed that the recitations regarding the circuit device are statements of intended use.
3. Claims 1, 6-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 11-107,112 for the reasons set forth in paragraph 3 of the previous action.
4. Applicant's arguments filed 12/1/05 have been fully considered but they are not persuasive.
5. Applicant argues that JP '112 does not disclose the specific spacing between the strands of the mesh in order to support the pad so as to prevent collapse during the wire bonding process. However, JP '112 teaches optimizing the spacing the fibers in the weave in order to form a fabric having the desired strength. JP '112 teaches optimizing the weave density by making the spacing between the adjacent strands small so as to increase the accuracy and efficiency of circuit boards which employ the fiber glass

cloths. Therefore, JP '112 teaches that the weave density is a result effective variable.

This teaching would seem to be relevant to prevention of collapse as well as to the control of the expansion and contraction of the fabric during use.

6. Applicant argues that the importance of the spacings is shown by the fact that the parent application has matured into U.S. Patent No. 6,488,198. However, US '198 is drawn to a method of support a circuit pad while the instant claims are drawn to a woven glass fabric with a particular intended use. Therefore, the reasons that US '198 was allowed would not necessarily be persuasive in determining the patentability of the instant article claims.

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
